**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 16-32, drawn to a magnetic resonance imaging (MRI) apparatus for acquiring medical imaging data, classified in class 378, subclass 162.
  - II. Claims 1-15, drawn to specific functions of a Graphical User Interface (GUI) for prescribing medical imaging session, classified in class 345, subclass 810.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention II comprises of an MRI system having a plurality of gradient coils positioned about a bore of a magnet to impress a polarizing magnetic field, and an RF transceiver system and an RG switch controlled by a pulse module to transmit RF signal to an RF coil assembly to acquire MR image. Proper functioning of the magnet, wherein a magnetic field is created in order to obtain MR images, does not require the specific functions of GUI as disclosed for invention II. The GUI allows user input during the medical imaging process, but the user input is not required. The MRI apparatus is able to obtain MR images in automatic

mode based on pre-programmed automation process without the need for user input using the GUI. The subcombination has separate utility such as the GUI of invention II is applicable to a plurality of medical imaging apparatus, such as CT, X-ray, and ultrasound imaging. The GUI allows the user to specify the parameters of the processes of obtaining and processing medical images but is not limited to an MRI apparatus. Further, the GUI of invention II is applicable to non-medical imaging apparatus, wherein user input is desired but not necessary.

3. A telephone call was made to Mr. Timothy J. Ziolkowski, the attorney of record on 02/04/2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
